Schlumberger CanadaM  
**WD/LWD Field Specialist. 2002-2006**

### **EDUCATION AND TRAINING**

Dalhousie University, 2006  
**Bachelor of Environmental Engineering**

A founding partner of LMMW Group Ltd. and a registered professional engineer, Marc has extensive experience in the energy, waterworks and industrial construction sectors. Marc offers a well-rounded and diverse background of technical competencies in the renewable energy generation, energy transmission and climate change space. This experience helps guide and advise LMMW Group clients toward development of practical strategies to mitigate the regional and global impact of climate change.

Marc's background and experience in the oil/gas and electric utility sectors has provided him with important context for understanding the role that hydrocarbon supply and energy consumption play in the economy and environment. This perspective enables him to advise our clients how best to achieve climate mitigation solutions that displace all, or portions of, hydrocarbon energy consumption with cleaner, renewable sources.

As a project delivery professional, Marc understands the requirements for advancing projects from concept selection through implementation and commissioning to operations. These skills include risk, project cost and schedule management, advancing technical definition and design, sub-contractor management, regulatory agency engagement, and multi-partner agreements. Marc has experience in phase-gate project management methodology on large regional energy projects and understands the importance of scalability of project controls, based on complexities and risks per client requirements.

### **ROLE IN LMMW PROJECTS**

Marc will provide technical advice as it relates to energy sources, conversion and building efficiency solutions, including project implementation and management. He also oversees cost estimating to ensure operational excellence and best value is delivered by subtrades engaged for facility energy and decarbonization retrofit implementation work.
