

DEEP ENERGY RETROFITS AND FACILITY UPGRADES

Optimize and modernize your facility

With access to the largest construction, renovation and energy retrofit teams in Atlantic Canada, our L360 team delivers depth of resources and scalability.

Our team of engineers, estimators, project managers and skilled subtrades (LMMW Partner Program members) have the expertise to tackle any project.

From HVAC retrofits and renewable energy system installations, to facility upgrades and general renovations, L360 unifies all critical resources under a single umbrella. The result? A more energy efficient and better performing building!

An integrated approach to decarbonization, energy efficiency, and facility performance optimization

We believe that stepping outside the traditional project development and delivery model is critical to improving the resilience of our built environment, while reducing our environmental impact and providing sustainable socioeconomic benefits to our communities.

Implementing recommended energy retrofits and facility upgrades involves engaging members of our team previously engaged with the **Discover** phase of the project. This integrated approach ensures a better understanding of the design and project objectives, which helps reduce risk for our clients and significantly speeds up the overall project implementation process.

Our transparent and collaborative procurement process ensures a practical balance between good value and best-in-class solution implementation.

L360's deep energy retrofit and facility upgrade services include:

- Facility Renovations
- Solar PV
- Battery Energy Storage Systems
- HVAC Upgrades
- Windows, Doors
- Electrical Upgrades
- Plumbing
- EV Charging Systems
- Roofing, Cladding
- Insulation
- Lighting
- Painting
- Fire Suppression Systems
- Flooring
- Telecom, Security
