

# RENEWABLE ENERGY SYSTEMS

## Harness the power of sustainable energy

Implementation of sustainable energy enables building owners to reduce fossil fuel consumption and lower overall carbon emissions.

Our team will help you design, install, and maintain the optimum renewable energy systems appropriate for your facility.

### Achieve greater energy independence, savings, and emissions reduction.

- Solar Photovoltaic (PV)
- Battery Energy Storage Systems (BESS)
- Electric Vehicle (EV) Charging Infrastructure

### Reliable, clean, and resilient power

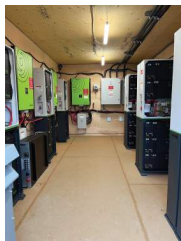

Solar Photovoltaic (PV) systems harness the abundant power of the sun, providing a reliable and renewable source of electricity. *Key benefits include:*

- Significant cost savings over time, as solar energy reduces dependency on conventional grid power and often results in lower electricity bills.
- Enhances resilience of buildings by offering a decentralized power source, reducing vulnerability to grid outages.
- Solar panels are versatile, allowing for integration into various building structures.
- Reduces operational carbon emissions.

### A new era of power management

Battery Energy Storage Systems (BESS) offer building owners a transformative solution that goes beyond conventional power management. *Key benefits include:*

- Reliable temporary backup during power outages, ensuring uninterrupted operations.
- Optimized energy consumption, strategically discharging stored energy during peak demand hours, thereby reducing electricity costs and reliance on the grid.
- Scalable to various building sizes and energy needs, offering a flexible solution for both residential and commercial properties.
- Reduced operational carbon emissions.

### Which Renewable Energy System is right for your facility?

Our extensive experience in renewable energy, coupled with our collaborative process, helps ensure the right systems are specified to meet your operational and budgetary requirements. Our team will also assist with identifying options for project funding to help you maximize return on investment.

Contact us today to get started!

### Why Renewable Energy?

- Cost savings
- Energy independence
- Emissions reduction
- Competitive edge in market
- Regulatory compliance
- Energy security and resiliency
- Employee engagement
- Long-term viability
- Access to incentives

LMMW Group Ltd. is an energy and facility services company operating under the **Equilibrium Engineering** and **L360** brands.

DISCOVER. OPTIMIZE. MAINTAIN.
